Yes thanks.

The article is not really focused. It discusses Hoosick and tried to link the two.

Seneca has two area identified which they are sampling.

We are also requesting that they do a Preliminary Assessment to confirm or exclude any other possible sources. We also asked that they look into off site wells and whether there are any that could be potentially impacted.

Then Site Investigation work will be performed.

Bob Morse is the RPM.

Hey Doug,

This article about PFOA and PFOS at the Seneca Army Depot came across my desk last week.

<https://waterfrontonline.blog/2018/11/20/carcinogenic-chemicals-plaguing-hoosick-falls-are-rampant-at-seneca-army-depot/>

Do you know anything about this site? Is there someone assigned to it at EPA?

Dan
